Sell on AgentSkope: integration guide

Put your product on AgentSkope and sell it, with monthly plans if you want them. Follow the steps in order. The checklist at `/1scribe/sell` follows the same order: Account (Step 1), Listing (Steps 2 to 4), Prove it (Steps 5 and 6), Publish (Step 7). Steps marked **Checked by AgentSkope** turn green on the checklist at `/1scribe`; the others are yours to tick off.

Prices, platform charges and payout timing are in the **Vendor fees and pricing** section on `/1scribe`. They are not repeated here.

Step 1. Get your account ready

1. **Verify your builder account** in your dashboard settings. Publishing needs a verified builder account. *Checked by AgentSkope.*
2. **Accept the Seller Agreement** (dashboard, Settings, Seller Agreement). It is needed before you can read buyer details, such as the purchases list and the purchases API. Buyer details are for support and upgrades only. *Checked by AgentSkope.*
3. **Connect your payout account** (dashboard, Earnings, Set Up Payouts). You connect your bank account through Stripe to receive earnings. You can build and publish a listing before this step is done; connect it before your first sale so earnings can be paid out. *Checked by AgentSkope.*

Step 2. Create your listing

1. Open **My Products** and choose **List Your Product**.
2. Name and describe the product and add a **listing image**.
3. Choose how it is offered:

Mode	What buyers can do
Listing only	See a listing page. They cannot try or buy on AgentSkope; you can send them to your own site
Buy	Buy or subscribe on AgentSkope. No sandbox
Try & Buy	Test the product in a sandbox, then buy or subscribe. Needs a connected source and a successful build

Step 3. Set your plans and price

1. Open the product's **Pricing** page and set a price.
2. Add at least one **plan** (SKU) and choose its **license type**. Buyers choose a plan at checkout, so each plan needs a price and a license type.
3. Decide what each plan includes: features, limits and seats. *Your decision.*

Plan and price are Checked by AgentSkope.

Step 4. Offer a monthly plan (optional)

1. Turn on the **subscription offer** for the product.
2. Add at least one **monthly plan** with a price.

Checked by AgentSkope.

Step 5. Make your product honour the license

A buyer who pays receives a license, which appears in their dashboard and is emailed to them. Your product must check it. Follow **Licensing integration: steps** (downloadable at `/1scribe/licensing`) so a purchased license unlocks the right features and limits.

If your plans are fulfilled by you instead of by a license key, be ready to deliver within the delivery window. *Your decision.*

Step 6. Test a purchase

1. Sign in with a different buyer account and buy your own plan.
2. Confirm the license arrives and unlocks the right plan in your product.
3. Check that expiry and cancellation behave as you expect.

Step 7. Publish

1. Open the product's **Publish** section and clear the checklist it shows. Typical items: builder account verified, listing image, price set, at least one plan with a license type, and, for Try & Buy, a connected and built source.
2. Submit the listing. Your products page shows its status. Some listings are reviewed before they go live.

"Publish your listing" is Checked by AgentSkope when the listing is live.

Step 8. After your first sale

- Watch **Earnings** for payouts and **Licenses** for the licenses issued to buyers.
- Read buyer details only for support and upgrades, as the Seller Agreement says.
- Keep your product's license check running; webhooks (optional) tell you when a license changes.

Quick checklist

- [ ] Builder account verified
- [ ] Seller Agreement accepted
- [ ] Payout account connected

- [ ] Listing created with an image
- [ ] Price set; at least one plan with a license type
- [ ] Monthly plan added (if you offer subscriptions)
- [ ] License check working in your product
- [ ] Test purchase done
- [ ] Listing published
